

Water Feature Clear

Green water and blanket weed treatment

EcoPond Water Feature Clear is an eco-friendly approach to the problem of green water, algae and blanket weed in fountains, barrel features and small ponds.

The product works by starving the algae and changing the water chemistry to inhibit algae growth and provide good water clarity.

Benefits of Water Feature Clear:

- Controls algae, green water & blanket weed in water features.
- Helps eliminate stagnant odours and reduces the need for cleaning
- Safe for all feature types including stainless steel, stone and wood.
- Clean, simple and easy to use.
- Safe for plants, humans, pets and wildlife.

Dosage: 30ml as an initial dose for features up to 20 litres
10ml per week thereafter
For larger features or ponds increase dosing proportionally.

Water Feature Clear is formulated from micro-organisms grown on straw which is produced under the F.A.A.B (Farm Assured Scheme). No herbicides or pesticides are introduced in the growing process, or during the production process.

Additional information:

- Water Feature Clear does not contain chemicals
- Natural products sometimes work less quickly than available chemical products but offer a safer solution

Frequently Asked Questions:

What is Water Feature Clear?

Ecopond Water Feature Clear is an eco-friendly product containing algae-inhibiting micro-organisms grown on barley straw.

What does Water Feature Clear do?

The action of the micro-organisms starves single cell and filamentous algae, and changes the water chemistry to leave the water clear and free from blanket weed.

How much do I need?

One 250 ml bottle will treat up to 200 litres (45 gallons) of feature water.

How do I use it?

We recommend dosing 30ml for features up to 20 litres (approx. 5 gallons) as an initial dose followed by 10ml per week thereafter. This ensures a background level is maintained within the feature so that it continues to work effectively.

It is best added near to a re-circulating system or pump to ensure it is well mixed, but otherwise, simply sprinkle it across the surface of the water feature or where the water is stored underneath the feature. 250 ml and 500 ml Water Feature Clear bottles have a built-in measuring chamber, so it is very easy to apply the dose required.

Please note: the above dosages are given as a guideline, as all features, and algae are different and respond differently to treatment. Water Feature Clear is a totally natural product, so it may take a few weeks before you see the full effect. If you are not satisfied that it is working quickly enough you can add more.

What are the benefits of using Water Feature Clear?

Its regular use will help control blanket weed, algae & green water and help to maintain good water clarity, eliminate stagnant odours and reduce the need for cleaning.

Is there anything that stops Ecopond Water Feature Clear from working?

Water Feature Clear works well under most conditions, but you may require a higher dose in water features with a high silt content, or if you have a solar powered fountain (by its nature the water will be warmer which will make algae more active).

Is there a situation where it cannot be used?

No, it is safe to use with all types of water feature including stone, stainless steel and wood.

What happens if I add more than the recommended dose?

Don't worry. It is a totally natural product and adding too much will do no harm. It may even control the algae more quickly.
